WELL-2502-0001	168 HAWK DR Merced, CA 95341	Water Quality Contr	2/26/2025	Kleinfelder proposes to explore the subsurface conditions at the site by drilling two (2) exploratory borings within the proposed storage silo footprint, where accessible, to depths of up to 20 to 80 feet below ground surface (bgs). Borings will be advanced using a truck mounted drill rig utilizing hollow stem auger and/or mud rotary techniques to explore the site's subsurface lithography. Relatively undisturbed in-place samples will be collected by driving a 2.5-inch I.D. split barrel sampler containing brass liners into the soil. Upon completion, the borings will be backfilled with auger cuttings. 0 cuttings.	Water Quality Contr	\$0.00
